

Web Streaming

Sample coming soon

"Streaming" multimedia, allows the user to begin viewing video clips stored on a server, without first downloading the entire file. After a brief period of buffering, the file will begin to stream - or play - in real time.

This is a great stress free way for prospective and existing clients to view your Products, Services, Message or Facilities from any location worldwide and has unlimited applications.

We can take your existing footage whether on DVD or video and convert it for web streaming or create new footage to best suit your needs.
